V-Secure Technology
Chenxin Lingchuang Info Ltd.

Intelligent blocking of malicious URLs	Device Management
Real-time alert on virus	Scene management
Anti-malware	User-defined black and white list
Anti-hijacking	Mail protection
Fraud prevention	Corporate VPN
Anti-leakage	External storage supported
Wi-Fi squatter defense	Threat dynamic graph display
Management of time online	Notification
Content control	Content statistics

The V-halo integrates the functions of routing, network security protection, device control, scene management, network activity governing, VPN and storage. It brings about an all-round and three-dimensional security protection system from the terminal to the cloud, and also realize the security capability coverage in the field of intelligent terminals such as computer terminal, mobile terminal, IoT terminal, smart home and wearable device, providing security capacities such as interception of super malicious URLs and intrusion defense for the home and corporate users, and identifying and shielding intelligently the threat of malicious URLs such as phishing sites and hacker invasions. At the meantime, it also has the ability to control devices and scenes, and effectively govern the access of IoT devices in the home and corporate networks, and time and content of Internet surfing. In the event of malicious URL, hacking, violation, or unknown access, it will send immediate notification to help users keep abreast of home and corporate network security updates.
